

# MAKE QUALITY SILAGE WITH MOLASSES

E D & F Man Liquid Products carried out supervised on-farm trials in 2012 & 2013, to quantify the response of molasses as a silage additive. The results showed that it increases profitability significantly and gives an excellent rate of return on one's investment.

**Using molasses as a silage additive represents a *no cost insurance* against getting a poor fermentation.**

**Molasses as a silage additive gives you:**

- (a) **A natural, effective and fast fermentation**
- (b) **Extra feed value**
- (c) **Increased dry matter digestibility (DMD)**
- (d) **Improved palatability**
- (e) **Higher silage intakes**
- (f) **Reduced spoilage and waste**
- (g) **Maximum returns from forage**

## **Independent Research Trial**

A silage trial to evaluate molasses as a silage additive carried out by Teagasc established that in ideal silage making conditions the use of molasses increased the DMD by 1.8%  
[Reference – G. Keles, P. O'Kiely and P. D. Forristal, Irish Journal of Agricultural Research, Vol.49, No.1, 2010].

***This is consistent with our 2012 & 2013 on-farm trial results.***
